U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that the Horn reference does not disclose providing data that includes an indication of the number of TCP connections. Applicant argues that the the provided data refers to the number of TCP connections initiated while Horn refers to the number of possible connections to be initiated. Applicant's argument is not persuasive because the limitation in question was interpreted consistent with Applicant's specification. Applicant's specification recites that the client control application "provides configuration data to the server 104" where the "configuration data will include a PROPOSED number of TCP connections to be opened" (emphasis added) [0034 | see also 0050]. Applicant's specification discloses supplying the possible number of connections to the server and not the number of already initiated connections. Applicant's specification does not support Applicant's argument that the limitation should be interpreted to refer to the number of already initiated connections between the client and the server.

Therefore, Horn's teaching that a client scheduler providing rules that specify a number of channels to use for a session reads on Applicant's claimed limitation of providing an indication of the quantity of the plurality of TCP connections.
